SONIC DELIGHTS FOR YOUR LISTENING PLEASURE

## SONOPHILIA PRESENTS

Train Sounds is an electroacoustic piece based around sounds recorded at a London station and at a level crossing in Hertfordshire.

The sounds were granulated\* and used to form synthesizer sounds whilst retaining the original field recordings. I wanted to create a train piece using the sounds of modern locomotives.

\*Sonophilia's note : Granular synthesis is a process by which a sound is broken down into short lengths of time which, when repeated form a musical note retaining the texture and characteristics of the original source. Using variations on this method, any recording can be processed into a virtual musical instrument.
